A/UX: Problem Printing to ImageWriter from Mac OS (9/94)

Article Created: 19 March 1991

Article Reviewed/Updated: 8 September 1994

TOPIC -----

I am running A/UX on a Macintosh IIcx. If I switch from A/UX to the Macintosh OS and try to print from a Macintosh application to the ImageWriter (connected via the printer port) the system won't print.

DISCUSSION -----

If the system prints in A/UX but not in Macintosh OS, make sure that the direct, serial-printer driver for the ImageWriter is installed and configured properly.

If the printer does not print in A/UX either, we know of a problem when the printer is directly connected to the PRINTER port under either mac32 or mac24 environment (print from a Macintosh application). However, there is no problem on the direct connect MODEM port.
