## A/UX 2.0: What who Returns

Article Created: 11 February 1991

### Article Change History

-----  
08/31/92 - REVIEWED

- For technical accuracy.

### TOPIC -----

When I do a who, it always says I am on console and on /dev/ttyp0.

### DISCUSSION -----

When you are using term (or Command Shell in 2.0), the multi-window terminal emulator, whoever launched term (or Command Shell in 2.0) is logged in on the console. The login windows generated by term (or Command Shell in 2.0) each have their own pty (pseudo tty) port. That is why the who command shows two active login sessions even though only one person is actually using the system.
