A/UX and Macintosh Display Card 8•24 GC (4/94)

Article Created: 26 March 1991

Article Reviewed/Updated: 1 April 1994

TOPIC -----

What versions of A/UX support the Macintosh Display Card 8•24 GC?

DISCUSSION -----

The Macintosh Display Card 8•24 GC works with A/UX 2.0 through the current release as of this writing. However, acceleration cannot be enabled on the card, it will behave as an 8•24 card.

The QuickDraw acceleration features of the Macintosh Display Card 8•24 GC may or may not be supported in future releases of A/UX. Therefore, customers should not be expecting A/UX to support the card fully in the future.
