A/UX: Can't Run on Macintosh LC (8/94)

Article Created: 13 August 1991

Article Reviewed/Updated: 29 August 1994

TOPIC -----

Can I modify a Macintosh LC so it can run A/UX?

DISCUSSION -----

The Macintosh LC can't run A/UX because it lacks the required PMMU. Currently, Apple does not offer a PMMU upgrade for the Macintosh LC. This could be a third-party opportunity, though we aren't aware of any company manufacturing a PMMU for the Macintosh LC at this time.

Refer to the document titled "A/UX and Compatible Macintosh Computers" for a complete list of which Macintosh models are supported by A/UX.
