A/UX 3.0: Centris 610/650 (6/93)

Article Created: 10 June 1993

TOPIC ---

I have A/UX 3.0 and just got a Centris 610 8/230/CD. I want to load A/UX
on it instead of on my Macintosh IIci, but I can't install it successfully.
Also, can A/UX run from an external drive?

DISCUSSION --

A/UX 3.0 does not support the Centris 610, Centris 650, or Quadra 800.
However, the more recent release of A/UX, A/UX 3.0.1, supports the Centris
650 and Quadra 800. The Centris 610 lacks an FPU and, therefore, cannot
run A/UX (unless there is a FPU upgrade solution from a third party).

Yes, you can install A/UX on an external drive with a supported Macintosh
computer like the IIsi and be able to move the installed A/UX drive from
one supported machine to another supported machine. A/UX automatically
configures and rebuilds a new kernel when it finds a hardware change like a
new Ethernet NB card.
