How To Boot A/UX From startup# Prompt or on Startup (8/94)

Article Created: 2 February 1988
Article Reviewed/Updated: 23 August 1994

TOPIC --

How do you boot A/UX from the startup shell? How do you cause A/UX to boot
automatically on machine startup?

DISCUSSION ---

Initially, to enter A/UX Startup you must cancel the startup process for A/UX.
Once in the A/UX Startup shell, you see a command line prompt. The default
prompt is "startup#".

To boot the system from here, pull down the "Execute" menu and select "Boot".
This will launch the A/UX boot program. You can also type "launch" on the
command line and press Return.

To have the Macintosh operating system automatically boot A/UX on machine
startup, pull down the "Preferences" menu and select "Booting...". Place an "X"
in front of the option that says "Automatically Boot at startup". Then click
"OK".

Refer to the A/UX Local System Administration manual chapter on System Startup
and Shutdown for more information.

Article Change History:
23 Aug 1994 - Updated to describe the startup shell.
