A/UX: NFS server <hostname> not responding... Error (9/94)

```
Article Created: 15 October 1990
Article Reviewed/Updated: 6 September 1994

TOPIC -------------------------------------------------------------

I tried to mount a file system and got the error:

   NFS server <hostname> not responding, still trying

DISCUSSION --------------------------------------------------------

Check to see that the remote system (the one with the file system you're trying
to mount) is available.

Enter the line:

   ruptime

Here is an example of the kind of output you might see:

   grumpy        down  0:11
   sleepy        up 36+00:41
   snow          up   21:54

The system "grumpy" is down.  Because the host is down, the NFS file systems
aren't available and won't be available until the host comes back online.
