## A/UX: NFS Configuration (9/94)

Article Created: 15 October 1990

Article Reviewed/Updated: 6 September 1994

TOPIC -----

What files are modified when configuring a system to be an NFS server?

DISCUSSION -----

The following files are modified in some way when installing NFS:

- /etc/inittab
- /unix
- /etc/fstab
- /etc exports

The /etc/inittab file must be modified to start the BNET and NFS daemons.

The kernel, /unix, must be recreated to include the NFS modules.

The /etc/fstab file is a list of the local and remote partitions which are to be mounted automatically at boot time.

The file /etc/exports contains a list of the file partition which the server system will allow to be remotely mounted by other systems on the network.
