A/UX: MacTCP Services Unsupported (8/95)

Article Created: 14 August 1995

TOPIC ---

Do TCP/IP network services that run on MacTCP run in the Mac32 process of A/UX?

I've tried ftpd, mailshare, and Webstar, and none of them ever accept
connections.

DISCUSSION --

A/UX does support MacTCP calls in Mac32, which allows Mac OS programs to make
outgoing connections. However, A/UX does not have any support for incoming
sessions to connect to software that is listening as a server in MacTCP.

A/UX, being a form of UNIX, already has facilities to route incoming connections
to UNIX processes (such as ftpd, telnetd, and sendmail), but does not provide
any support for handing off connections to programs that use MacTCP.
