A/UX: How To take and put With cu (6/93)

Article Created: 7 September 1989

Article Reviewed/Updated: 23 June 1993

TOPIC -----

How do I take and put files with cu?

DISCUSSION -----

Use the ~%take and ~%put commands.

Once you have made a successful connection with cu from local_machine to remote_machine, you may take & put files with the following commands:

```
~%take filename
```

This command takes the file filename from remote_machine and puts it in the current directory on local_machine. The command:

```
~%put filename
```

puts the file filename from local_machine to the current directory on remote_machine.

If you do not want the file filename to be put in the current directory, specify an absolute pathname (although this is not recommended).
