A/UX: Determining Available Memory (9/94)

```
Article Created: 7 September 1989
Article Reviewed/Updated: 13 September 1994

TOPIC -------------------------------------------------------------

After I start up A/UX, and the splash screen is gone, how can I determine how
much memory is installed in the system and how much is available?  I am looking
for a shell command, if it exists.

DISCUSSION --------------------------------------------------

There is no command shipped with A/UX that will provide this information. It
would be possible to write a program that returned these values, but none are
included.

We don't think these values change frequently enough to require much attention.
Users generally know when they change the amount of installed RAM, and the
available memory only changes when the kernel is reconfigured.

A/UX 2.0: Select About the Finder in the Apple menu (while in the Finder)

A/UX 3.0: Open the Memory Control Panel for a display of both physical and
          virtual memory. ( Control panels can be found under the Apple
          menu)
