TOPIC --

This article describes the FMbackup utility you can use with A/UX.

DISCUSSION ---

FMbackup.sit is a useful utility. It keeps a current backup copy of your
.fs_cache (in compressed form) so that after a crash (toolbox or A/UX), it
restores the backup copy before you restart the Macintosh. You don't have
to manually relocate icons, windows, and so on.

You can find FMbackup.sit posted on AppleLink and A/UX Support Server
(aux.support.apple.com). Here are the paths:

```
     AppleLink
       Apple Support
         Field Engineer
           Field Materials
             Software

     aux.support.apple.com (130.43.6.2)
         /usr/spool/ftp/aux.patches/unsupported/2.0
```

This version of FMbackup utility works under A/UX 2.0.1 and A/UX 3.0, but
doesn't work properly under A/UX 2.0. The README file included in the
package gives the details.
