A/UX: How to Determine Which Partitions Are Being Exported

Article Created: 19 November 1990

Article Change History

08/31/92 - REVIEWED

- For technical accuracy.

TOPIC -----

How do I find out which partitions are being exported from another system on the network?

DISCUSSION -----

By using the "-e" options with the `/usr/etc/showmount` command and specifying a hostname, you can get a list of the partitions that are being exported from another system on the network.

For example, to get a list of exported directories from the system "macaux," enter the line:

```
showmount -e macaux
```

The output could look like this:

```
export list for macaux:
/s1      everyone
/        everyone
```

This output tells us that the "/" and "/s1" directories from the system "macaux" are being exported to everyone.
