A/UX: How to List Remotely-Mounted Directories (8/94)

Article Created: 12 October 1990

Article Reviewed/Updated: 25 August 1994

TOPIC -----

How can I find out which directories are remotely mounted?

DISCUSSION -----

By using the "-d" option with the /usr/etc/showmount command, you can get a list of the directories that are remotely mounted on other systems on the network. It does not list the system hostnames, just the directories.

Example output from the command line "showmount -d":

```
/
/users
/usr
/usr/catman
```
