A/UX: Log In Permissions (6/93)

Article Created: 18 November 1991

Article Reviewed/Updated: 17 June 1993

TOPIC -----

I can launch a Finder session as root, but not as a normal user. When I try to log in as a normal user, I get the message that it couldn't create /tmp/mac32sm.208.

DISCUSSION -----

The /tmp directory was only writable by root. Change the permissions of the tmp directory to 777 to log in successfully. 777 causes the directory to have the permission of status to read, write, and execute by owner, group, and others.
