A/UX: Adding Swap Space without Repartitioning (6/93)

Article Created: 18 November 1991
Article Reviewed/Updated: 17 June 1993

TOPIC ---

I keep getting a message about running out of swap space. Is there an
alternative to repartitioning the disk and enlarging the size of the swap
partition?

DISCUSSION --

Yes. You need to add a new swap space on a different hard drive and use
the command swap -a to have the system recognize the space. The command
swap -l (lowercase "el") will give you the status of the current swap
space.
