A/UX: MacX Q & A (9/94)

Article Created: 11 December 1991

Article Reviewed/Updated: 21 September 1994

TOPIC -----

- 1) Is it possible to have a single copy of MacX that everyone can launch at the same time?
- 2) Can I run the motif window manager under MacX?
- 3) MacX seems to have problems with a very large hosts file. MacX appears to handle addresses near the top of the hosts file, but doesn't seem to find addresses near the bottom.
- 4) When trying to use MacX to talk to an X Windows system on a VAX, does the VAX have to be running PATHWORKS?

DISCUSSION -----

- 1) No. MacX, like most Toolbox applications, wasn't written to be a multi-user application.
- 2) Yes, but only in a rooted window.
- 3) MacTCP 1.1 has a host file limitation of 7K. (The MacTCP 1.1.1 and later fixes this limit.)
- 4) Yes.
