Aristotle Setup: AppleTalk Slot Assignments

This article last reviewed: 2 March 1990

TOPIC -----

I am having trouble with Aristotle. I am using a 1MB Apple IIGS with GS/OS 5.0.2. I can successfully start up from the server, get into the Finder, launch applications, print, or do just about anything else. I can use Aristotle Menu Management, but the Display program gives me the message "AppleTalk must be installed to run this program" as soon as it launches. I reinstalled all my Apple II System Software. I also checked access privileges, and that everything's just fine. Why am I getting this message?

DISCUSSION -----

This can occur when the slot assignments are not correctly set. In particular, slot 7 needs to be set to "AppleTalk" when running the Aristotle Display program. Note: Network startup can take place, most applications can be launched, programming can take place in Applesoft BASIC, files can be saved on any available volumes, even though slot 7 is set to "Your Card".

For network startup and general network operations to work correctly, the slot assignments must set as:

Slot 1 (or Slot 2) = AppleTalk
Slot 7 = AppleTalk
Startup = AppleTalk
