Apple IIc, IIc Plus And IIe: Interfacing To An RGB Monitor

This article last reviewed: 8 November 1988

To interface an Apple IIe, Apple IIc, or Apple IIc Plus to a digital RGB color monitor, you must get an interface card, as well as a device called a Peacock, model CM2C. This device is available from Telemax Inc.

For more information, search under: "Telemax Inc."

To interface an Apple IIe to an analog RGB color monitor, you'll need something like the RamWorks memory card and the ColorLink RGB card, both available from Applied Engineering.

For more information, search on "Applied Engineering".
