Apple IIGS: Printing To Networked LaserWriter (9/95)

Article Created: 6 September 1988

Article Reviewed/Updated: 20 September 1995

TOPIC -----

I have an Apple IIGS on their network which has mostly Macintosh computers on it. Can you tell me what will happen if the Apple IIGS sends something to be printed, but the LaserWriter is already in use?

DISCUSSION -----

The Apple IIGS will respond in the same way as a Macintosh computer without background printing or spooling. The Apple IIGS will take its place in line and wait until the LaserWriter is available. Then the IIGS will print its documents.
