Apple IIGS: Hard Drive Always Starts Up From 1st Partition

This article last reviewed: 8 September 1989

TOPIC -----

I'm using a 20MB hard drive with an Apple IIGS. I used the Advanced Disk Utilities to partition the drive into four partitions. I installed AppleWorks on the first partition and the System files on the fourth partition. Every time I starts up the system, it launches AppleWorks first, which is not what I want.

Is there some way to control which partition gets opened first?

DISCUSSION -----

There is no method available for specifying which partition the system will start up from.

As the software is currently written, the system always starts up from the first partition. If you want to start up with the System files first, it is necessary to have the Finder, and so on, in the first partition. Then have your other applications follow in partitions of ascending numerical order.

There are currently no plans to change this method of operation.
