Article Last Updated:

TOPIC -----

My Apple IIe won't power up its disk drive when connected to a TV monitor.

DISCUSSION -----

If your RF modulator is the type that gets its power from the Apple IIe, the power supply could be the problem. Try unplugging one or more interface cards and see if the computer can power up with the RF modulator. If this works, try a new power supply. If it still refuses to power up, suspect a bad RF modulator.
