TOPIC -----

We have a classroom with 15 original Apple IIGS computers and one instructor station. Each workstation has an Apple 1MB board installed. We will be teaching using HyperCard for the Apple IIGS. What is the cheapest way to add more memory to our computers?

DISCUSSION -----

Apple does not offer a memory expansion card for the original Apple IIGS that goes beyond 1.25MB of memory. There are several third-party memory cards for the Apple IIGS that can handle HyperCard's memory requirements.

Check the Redgate Macintosh Registry on AppleLink for further information.
