Apple IIGS: How To Print to a LaserWriter

This article last reviewed: 14 July 1989

TOPIC -----

A person using Music Writer software on an Apple IIGS wants to print to a LaserWriter IINTX in the Sonata font, which Music Writer uses. How do you do this? Can you use fonts other than Courier and Times with AppleWorks 2.0?

DISCUSSION -----

Music Writer uses Pyware's own music font. It is similar to Adobe's Sonata font, but not from Adobe. The font is included with Music Writer. To print to any member of the PostScript LaserWriter family, make the usual ProDOS 16 or GS/OS printer choice. Then, from Music Writer, select the print command. The musical score then can be printed on the LaserWriter.

To use other fonts with AppleWorks requires PostScript programming knowledge. Beyond the changes mentioned, font selection for ProDOS 8 applications relies on changing the ImageWriter Emulator (IWEM) PostScript code. The font to be used is designated within the IWEM downloadable PostScript file.
