AppleWorks GS: How to Print Foreign Characters

```

TOPIC -----------------------------------------------------------

On an Apple IIGS, why can't I print foreign characters from AppleWorks GS
to a LaserWriter?

DISCUSSION ------------------------------------------------------

The Chooser II application in ProDOS supports only the standard character
set.  It doesn't print foreign characters displayed on the screen.  With
AppleWorks GS, anything other than Draft will print as a bitmapped version
of what is displayed on the screen.  This allows you to print foreign
characters.

The only other option is to get an application that supports foreign
languages.  For more information, search on "Claris".
