## Apple IIGS Finder: Two Desktop Update Problems

This article last reviewed: 10 March 1988

These problems have been reported and may be fixed in the next revision of the Apple IIGS Finder:

- The Clipboard window is not updated when it is open and changes occur. If you select a desk accessory that permits copy and/or cut when the Clipboard window is open, nothing changes until you force an update by moving something over the Clipboard window.
- The Finder window or an open Desk Accessory window does not become inactive when a diskette icon is clicked. Double-clicking on the diskette name starts the process of a rename (the name is surrounded by a rectangle), but typing is not possible or directed to an open desk accessory.
