GS/OS: Polling Drives For Disks Is Necessary

This article last reviewed: 21 October 1988

Some users have expressed concern that the Apple IIGS GS/OS polls disk drives
for the presence of a disk. The polling of drives under GS/OS is normal. Unlike
the Macintosh, which has built-in hardware and firmware to detect a disk, the
Apple IIGS does not. The Apple IIGS, via GS/OS, needs to poll the drives to
determine whether a disk has been inserted. There is no way to disable the
drive polling.
