GS/OS 5.0: Can Create Accented and Special Characters

This article last reviewed: 8 September 1989

TOPIC -----

I want to be able to display accented French characters on a localized Apple IIGS. What are my options?

DISCUSSION -----

The announcement of GS/OS 5.0 has some information that pertains to this very subject:

"The ability to create accented and special characters directly from the keyboard, something particularly important to customers working with legal and math symbols and other languages, is also a great addition."

GS/OS 5.0 has the capability of generating accented characters in the same manner as is done on the Macintosh.
