AppleWorks 2.0: Spreadsheet functions @AND and @OR

"@AND" and "@OR" test each value specified as an argument. They require a list of 2 or more arguments. While not necessarily, they usually are used with @IF: "@IF(@OR(A17>56,A18=0),.25,.333333)".

@AND takes any number of arguments, each of which must be a logical value or a range of logical values. Its value is 1 if all of the arguments are not 0; its value is 0 if any of the arguments are 0.

Syntax:

@AND(value:operand:value, value:operand:value)

Example:

@AND(A3>4,C5<4)

@OR takes any number of arguments, each of which must be a logical value or a range of logical values. Its value is 1 if any of the values is not 0; its value is 0 if all of the values are 0.

Syntax:

@OR(value:operand:value, value:operand:value)

Example:

@OR(A3>4,C5<4)
