AppleWorks 2.0: Printing to disk

When printing to disk, AppleWorks 2.0 only saves a document in this way with carriage returns ending each line (by selecting the Silentype printer option).

If you need to workaround this situation, the text file printed to disk by AppleWorks can be read into AppleWriter or a BASIC program. You can then replace all spurious carriage returns with spaces, taking care to recognize and preserve carriage returns at the end of paragraphs.

The feature of putting a carriage return at the end of a line was added because many people had problems transmitting text with lines longer than 255 characters.

All previous versions of AppleWorks printed to disk a file with carriage returns only at the ends of paragraphs.
