AppleWorks: Not enough room on disk to save file

When attempting to resave a previously-saved file on AppleWorks, you may occasionally be told that there is "Not enough room on disk" to comply with your request, even though you've made only minor changes to the file. The cause of the problem has to do with how Appleworks saves files.

AppleWorks saves the new copy of a file before deleting the old copy. Therefore, if the file you wish to save is 12K long (for example), you must have at least 12K of additional space available on the disk to which you wish to save. If that space is not available, you will get the error message.

The remedy is simply to free up a bit more space by deleting a file or two.
