TOPIC ---

With the network version of AppleWorks 3.0, how can privileges be set so
AppleWorks users can't delete the program or necessary program files?

DISCUSSION --

If Aristotle is not in use, within AppleShare you can assign a printer to a
particular user. You also have the option to select a printer from the
Chooser or to type the name. If the name chosen or typed in does not match
the spooled printer's name, the printer won't be seen. We suggest
verifying what the name of the printer for each user is.

You can set the folder privileges so the users have read-only rights. Don't
give users the ability to make changes.
