AppleWorks: Landscape Printing on LaserWriter Not Supported

Article Created: 13 August 1991

TOPIC --

I'm using a LaserWriter Plus with an Apple IIe and AppleWorks 2.1. I can
print to the LaserWriter using either Diablo emulation or the IWEM
ImageWriter emulator. (This is a stand-alone configuration, with the Apple
IIe printing through a Super Serial Card.)

1) Can the Diablo emulation mode print sideways?

2) Can I change IWEM for landscape printing, or could AppleWorks be
   used to send a PostScript "setup string" to the LaserWriter to prepare
   it to print sideways?

DISCUSSION ---

Landscape LaserWriter printing is not supported using Diablo 630 emulation,
just as it is not feasible on a Daisy Wheel Printer. The daisy wheel would
need another print head to handle the 90 degree rotation of print.

As far as altering the IWEM to print landscape, this is theoretically
possible but we know of no easy way to do this. It would involve a fair
amount of PostScript programming changes to the IWEM.
