Access II: Volume Not Found error

When formatting a disk under Access II, make sure that you enter the volume
name in UPPER CASE. Version 1.0 does allow you to enter a volume name in lower
case, but a disk formatted with a lower-case volume name can't be accessed.
After attempting to access such a disk, you'll get a "Volume Not Found" error,
even though the attempt was made with a valid volume name and correct pathname
syntax.

This problem was fixed in later versions of Access II.
