LOGO: Printing Graphics

Printing out the graphics screen from LOGO is awkward. The following steps will get the job done. Brackets indicate the text you enter from the keyboard.

1. Draw the graphics on the LOGO screen.
2. Insert an initialized diskette in slot #6, drive #1. This should be a blank diskette that has been initialized with the [INIT HELLO] command from Apple DOS 3.3. It should not contain a HELLO program, though.
3. Enter [.PRINTER 6]; this causes the system to boot DOS.
4. If you have a Silentype printer, you can simply enter [CTRL-Q] to print.
5. Enter [BSAVE filename, A8192, L8192]; this will save high res page #1 as binary file filename.
6. Now you must use whatever is appropriate to your system to print out graphics from a binary file.
7. To do more LOGO graphics, you need to reboot LOGO and start again.
