GS/OS 4.0 and Checkmate MemorySaver

This article last reviewed: 10 April 1989

Some users have reported problems installing GS/OS on the Checkmate
MemorySaver using the Installer and the Control Panel to set the start-up
slot. In fact, using the Installer to put GS/OS on the MemorySaver may be
the cause of the difficulties. Rather, follow these two steps:

1) Use the Installer to create a boot disk configured the same as the
   desired MemorySaver configuration.

2) Copy the contents of the configured boot disk to the MemorySaver.

Checkmate Technologies provided the following suggestions:

- Do not create a RAM disk in the Control Panel.

- Check MemorySaver partitions; you need one large enough to accommodate
  your configuration of GS/OS.

- Use a copy program like "System Utilities", instead of the Installer or
  the Finder "drag" copy technique.
