TOPIC -----

I want to add a high-speed SCSI card and a 85MB hard drive to my Apple IIe. Is there a ProDOS utility that can partition such a large drive?

DISCUSSION -----

The utilities disk that comes with the high-speed SCSI card can handle the partitioning. The only problem is that the Apple IIe can only see two partitions of 32MB each. So, only 64MB of the disk will be used; the rest of the space will be inaccessible.

The only other option is to search for a third party solution.
