Apple Writer III: Footnotes

Footnotes longer than 132 characters will stop Apple Writer III (versions 1.0 and 1.1) while printing with a WPL "FOOTNOTE OVERFLOW" error. There is no fix available at this time.

When a footnote is inserted in the text, the character immediately following the note is omitted. Example:

    The text:

        ....Apple User's Groups (<For more info, see page 16>)are a good....

    How it prints:

        ....Apple User's Groups re a good....

This problem can be worked around by adding an extra space after the footnote. Example:

        ....Apple User's Groups (<For more info, see page 16>) are a good....

Footnotes don't obey the Right margin. There is no fix available at this time.

Footnotes won't be printed if there isn't enough text on the page.
