## Apple Speller: Product Description

The Apple Speller III program provides quick, reliable spelling verification and vocabulary analysis of documents produced by any word processing software compatible with the Apple III system (except CP/M or emulation-mode software), including Apple Writer III and the Pascal III Text Editor. It verifies the spelling of every word in your document with an up-to-date Random House dictionary containing more than 78,000 words. Auxiliary dictionaries contain an additional 3400 words categorized as geography, names, abbreviations and figures. There are a variety of ways to customize these dictionaries to simplify your dictionary maintenance. You may add your own words to a new or existing dictionary, add or subtract one dictionary from another, or delete a dictionary you no longer need.

Apple Speller can be used with a 128K Apple III single disk drive system, but two drives are recommended to minimize diskette-swapping. The program's speed and performance is further enhanced on a 256K system or by using a ProFile. The Apple Speller manual doubles as a tutorial and is informative and useful.
