Business Basic III: Distinguishing between RETURN and ENTER keys

Using an invokable module (which you'd have to write), it is possible to detect whether the key pressed is located on the keypad or the main keyboard, and thereby distinguish (if you wish) between the RETURN key and the ENTER key. The Standard Device Drivers manual provides information on how this is done, particularly in Appendix G and in the chapter on the Console driver.

Also, Volume #1, Issue #1 of a magazine named "On Three" contains a program for recognizing the difference between the ENTER and RETURN keys. You can obtain a copy by writing to:

            Attn: Order Dept.
            P.O. Box 3825
            Ventura, CA 93006
            (805) 644-3514
