RPS: File Access Structure in REBUILD

In the following situations, the FAS (File Access Structure) was set up
incorrectly for the rebuild.

1. At an error -1406 (Index file is damaged), the RPS Damage Report showed
Index corrupted as TRUE. The RPS REBUILD gave error -1520 (No duplicate key
allowed). The key was set up as No duplicates allowed. Therefore the file was
inaccessible and couldn't be repaired.

2. A file with 13 records was set up the same way as the damaged file (making
sure there were no duplicate keys). The RPS REBUILD gave the same error.

To correct the problem, you would have to Consult the FAS in the program that
created the file.
