Power Macintosh DOS Compatibility and Personal Netware (5/95)

Article Created: 3 May 1995

TOPIC ---

We have a Power Macintosh 6100/66 DOS Compatible computer, and we've installed
Personal Netware on their DOS machine. We have experienced numerous freezing
problems since, and we believe this is associated with Personal Netware. The
README.NET that comes with the 6100/66 DOS Compatible computer says "Personal
Netware is not supported at this time."

Are there any details on Personal Netware with the Power Macintosh DOS
Compatibility Card? Is it unsupported, untested, and/or incompatible? If it is
incompatible, can you describe specific behavior?

DISCUSSION --

As of May 1995, Personal Netware is unsupported and untested on the Power
Macintosh DOS Compatibility Card, so we have no specific behaviors to report.
Also there are no plans for testing this software.
