Quadra 610 DOS: CONFIG.SYS & AUTOEXEC.BAT Files (6/96)

Article Created: 14 September 1995
Article Reviewed/Updated: 4 June 1996

TOPIC ---

This document lists the contents of CONFIG.SYS and AUTOEXEC.BAT for the Quadra
610 DOS Compatible computer (and DOS Compatibility Card for Centris and Quadra
610) as they appear from the factory. As of 4 June 1996, the only version of PC
Setup Apple Computer, Inc. fully supports with the Macintosh Quadra 610 DOS
Compatibility Card is version 1.0.2. Later versions of this software may work
properly, however Apple has not fully tested them with the Quadra 610 DOS
Compatibility Card.

DISCUSSION --

If you have lost or changed your CONFIG.SYS or AUTOEXEC.BAT files and want to
restore them to their original conditions, edit them to match the following
information.

NOTE:
You can also mount your MS-DOS/Windows container and open these files from
within the Mac OS. However the application you use to edit these files must be
able to save hard carriage returns as carriage return and line feed. The Mac OS
normally uses ONLY carriage returns, but MS-DOS requires both carriage returns
and line feeds.
