PC Compatibility Card: Only Built-in Ethernet Supported (5/96)

Article Created: 20 May 1996

TOPIC ---

Can I use a PCI-based Ethernet or Token Ring card with my PC Compatibility
Card?

DISCUSSION --

The PCI-based PC Compatibility Cards support only the built-in Ethernet port on
your Power Macintosh computer. On this port, you may run AppleTalk, TCP/IP,
IPX/SPX, and/or NetBEUI.

Although the PC Compatibility Card software comes with a Token Ring ODI driver,
it has not been fully tested and is not supported.
