Ofoto for Windows: Out of Memory Error in 16-bit Video

Article Created: 22 December 1992

TOPIC ---

Since I upgraded my 486-based PC to 16-bit video, I get an out of memory error
when trying to run Ofoto for Windows. I tried to re-install Ofoto, but the
installation crashes with a video driver error. When I returned to 8-bit
operation, it worked OK.

DISCUSSION --

Ofoto for Windows runs only on systems with video displays running at
1 bit, 4 bits or 8 bits. It does not run at thousands or millions of colors.
