OneScanner for Windows: Using Its SCSI Card with Other Devices

Article Created: 23 March 1992

Article Last Reviewed:

Article Last Updated:

TOPIC -----

The SCSI card bundled with Apple OneScanner for Windows can be used with other SCSI devices, such as a hard drive. Note: Apple does not support other SCSI configurations, cards, or devices.

To use the card with a SCSI device other than OneScanner, you need the driver software that is available from Adaptec, the card's manufacturer.

DISCUSSION -----

Using the SCSI card for other devices can be tricky. Sometimes SCSI IDs must be set with a jumper on the card and the software must be reconfigured to use another address for the card.

Similarly, the scanner will theoretically operate with other SCSI cards or some built-in SCSI implementations, but different drivers will be required -- and Apple will not support other SCSI cards. (Note that this rules out all Microchannel-equipped IBM PS/2s as supported configurations.)
