DOS Compatibility Card: All Display Modes Not Supported (2/95)

Article Created: 11 January 1995

Article Reviewed/Updated: 22 February 1995

TOPIC -----

I have a SuperMatch 20-inch monitor connected to the DOS Compatibility Card, but I cannot get the PC Setup control panel to recognize the monitor. The VGA resolution option is dimmed.

DISCUSSION -----

The DOS Compatibility Card does not support all multiscan displays. If the PC Setup Control Panel does not recognize your monitor, and the VGA resolution option is dimmed, your monitor may not be supported. In this case, your monitor only works in the mode the hardware recognizes.
