DOS Compatibility Card: Problem W/ Reflections for Windows 9/95

Article Created: 14 September 1995

TOPIC-----

I am using Reflections with a DOS Compatibility Card, and sometimes when I click outside the Reflections window the pointer begins to jump around the screen and randomly click. What can I do to correct this problem?

DISCUSSION-----

After some discussion with Walker Richer & Quinn, Inc. who produces the software, the following situations were discovered.

Reflections 4.21, DOS Compatibility Software 1.0.3 and Windows 3.11:

The mouse begins to jump around and click. The only way to resolve the problem is to use keyboard equivalents to save work and exit Windows. When Windows is restarted, the mouse returns to normal.

Reflections 4.21, DOS Compatibility Software 1.0.7 and Windows 3.11:

Same as above.

Reflections 5.0, DOS Compatibility Software 1.0.7 and Windows 3.11:

The mouse begins to jump around and click, but returns to normal if left alone for a few seconds.

Reflections 5.0, DOS Compatibility Software 1.0.7 and Windows 95:

No problems.

Based on these findings, you should upgrade to at least DOS Compatibility Software version 1.0.7 and Reflections for Windows 5.0. Upgrading to Windows 95 is also recommended.
