## Pwr Mac DOS Compat Card: CONFIG.SYS & AUTOEXEC.BAT Files

Article Created: 14 September 1995

Article Reviewed/Updated: 23 May 1996

TOPIC -----

This document lists the contents of CONFIG.SYS and AUTOEXEC.BAT for the Power Macintosh 6100 DOS Compatible (and DOS Compatibility Card for the Power Macintosh) as they appear from the factory.

DISCUSSION -----

If you have lost or changed your CONFIG.SYS or AUTOEXEC.BAT files and want to restore them to their original conditions, edit them to match the following information.

### NOTE:

You can also mount your MS-DOS/Windows container and open these files from within the MacOS. However the application you use to edit these files must be able to save hard carriage returns as carriage return and line feed. The MacOS normally uses ONLY carriage returns, but MS-DOS requires both carriage returns and line feeds.
