Share DOS Volume Between Power Macintosh DOS Computers (10/95)

Article Created: 18 October 1995

TOPIC ---

Can a Macintosh folder on a Power Macintosh 6100 DOS Compatible computer be used as a shared DOS volume and be seen as a shared DOS Drive on another Power Macintosh 6100 DOS Compatible computer?

DISCUSSION ---

Yes, you can do what you describe by following the steps below to mount a shared DOS volume.

Step 1

Create a folder on the desktop of the source Power Macintosh 6100 DOS Compatible computer, and map the folder to a drive letter using the Sharing option in the PC Setup control panel.

Step 2

Use Macintosh personal file sharing to share the folder, created in Step 1, on the network. Also be sure your Users & Groups control panel has either the shared user, or everyone setup so the destination Macintosh can access the folder.

Step 3

Mount the shared folder on the destination Power Macintosh 6100 DOS Compatible.

Step 4

Map this shared folder, from Step 3, to a drive letter with the Sharing option of PC Setup control panel.

Step 5

The same folder is now seen as a mounted drive in the respective DOS environments.

Please Note: The computers used to test this setup both had SIMMS installed on

the DOS Compatibility Card. This lets the PC environment operate without sharing memory with the Macintosh environment.
